# Conflict data

ACLED is the highest-quality and most widely used near-real-time source on political violence and protest data worldwide.

Data Export Tool   Download data files   Data platforms   Conflict categories   Knowledge Base

Data Export Tool

View and download a specific subset of the data using filters for location, event type, date, etc.

Download data files

Our data files cover several different regions, countries, actors, and other groupings.

Knowledge Base

The latest information and guides to best understand and use ACLED data.

FAQs

A selection of questions frequently asked by users of ACLED data.
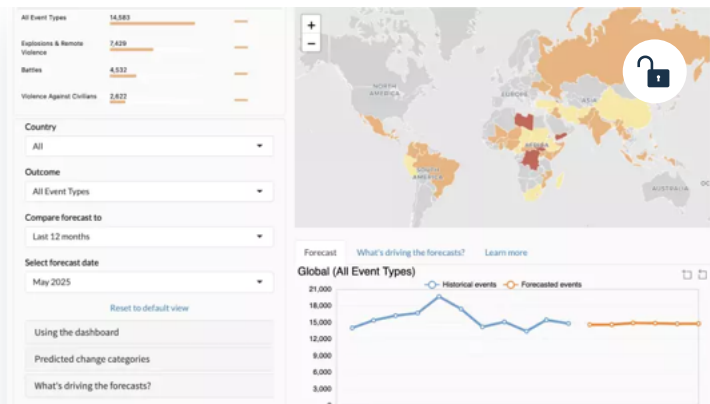

Methodology

Documentation on ACLED's methodology, including how ACLED sources and codes information on political violence and protest.

Use and access guides

General guides on how to use and access the latest ACLED data.

Update log

A running log of the latest changes in the ACLED dataset.

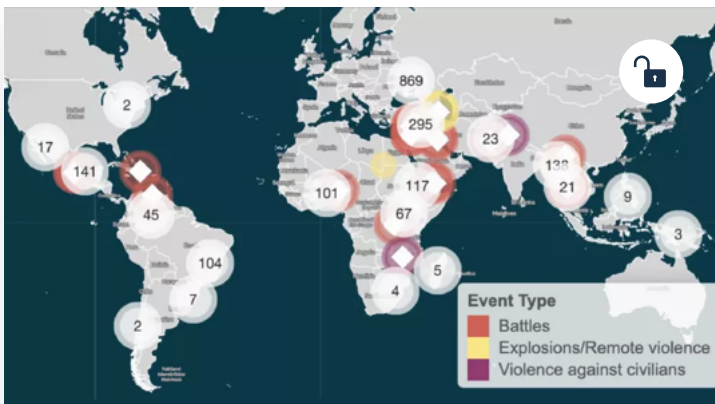

CAST | Conflict Alert System

The ACLED Conflict Alert System (CAST) is a conflict forecasting visualization platform that predicts political violence events up to six months in the future for every country in the world.

Explorer

The ACLED Explorer allows you to filter and summarize data from the past year. Country profiles show data at the subnational level, as well as trends based on number of events, fatalities, and civilians exposed to violence.

Trendfinder

ACLED Trendfinder offers an array of interconnected tools for tracking patterns of political violence and protest. Using the visualization platform, you can identify important changes in political violence and protest across and within countries, situate this activity within historical contexts, and spot early warning signs.

Conflict Exposure Calculator

The Conflict Exposure Calculator integrates data from ACLED with population size estimates from WorldPop, to estimate the civilian impact by proximity to an event, event type, type of violent actor or specific armed group, location, and time.
